Why not managing everything in one system?

A system as a replacement for many single and standalone solutions that are already used, which at the same time do not provide the performance and still require manual tasks without proper interfaces.

Grown it-structures are facing new challenges for your asset management in terms of documentation and transparency.

Only a complete inventory of all sectors ensures to get back your needed overview and transparency.

Increase transparency – Reduce costs

Avoid long paying leasing objects or old contracts. Don't miss cancellation or replacement deadlines in your contract management

Beside the contract management the license management has an important role too, which often doesn't get the required attention.

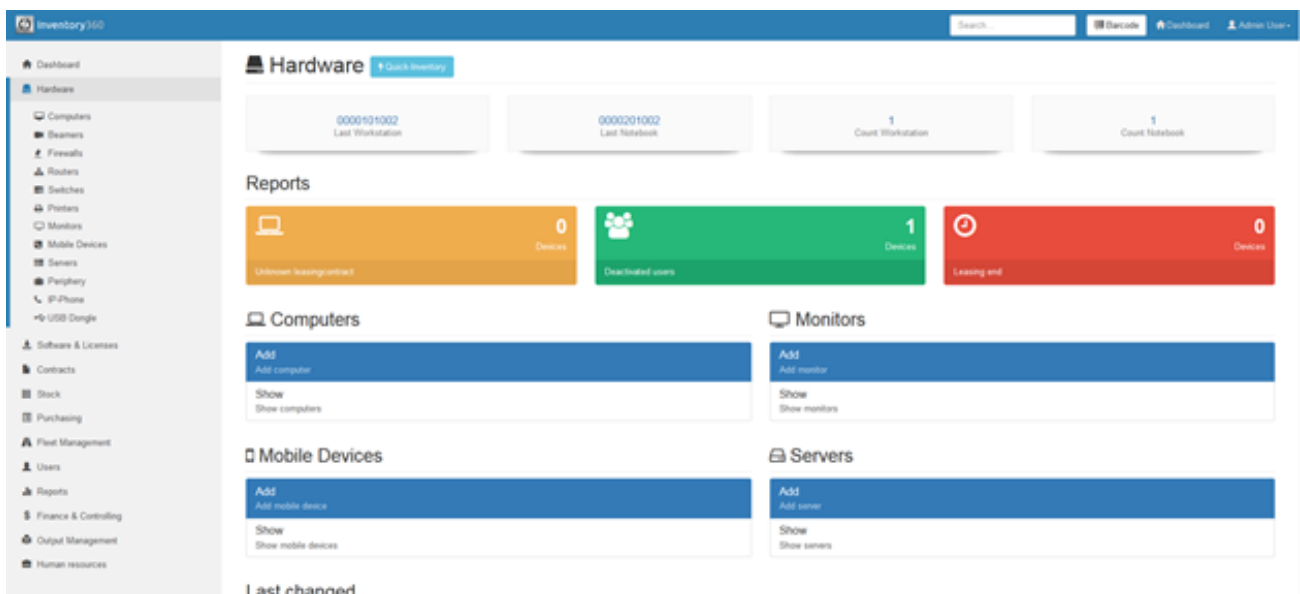

With Inventory360 you always keep the track on your licensekeys and periods of validity. Processes are standardized and repeated workloads can be avoided.

Lifecycle Management

Create a record history of your assets. By that you can document your purchase processes, orders, inventory, asset changes, user changes, scrapping or returns.

We centralize all these requirements and offer, beside the optimization, also saving potentials as well as documentation and evaluation of your company.

Optimized integration

Need-based provisioning as a SaaS solution or on-premise in the form of a virtual appliance. Inventory360 enables a proper connection between your business processes and workflows.

- ✓ Active Directory / LDAP
- ✓ CSV Im- and Export
- ✓ Migrationassistant
- ✓ Customizable

Quick overview within milliseconds

The intelligent search function enables a perfect overview within milliseconds – even with large databases.

The search function automatically lists all dependencies like leasing contracts or orders.

Customizing

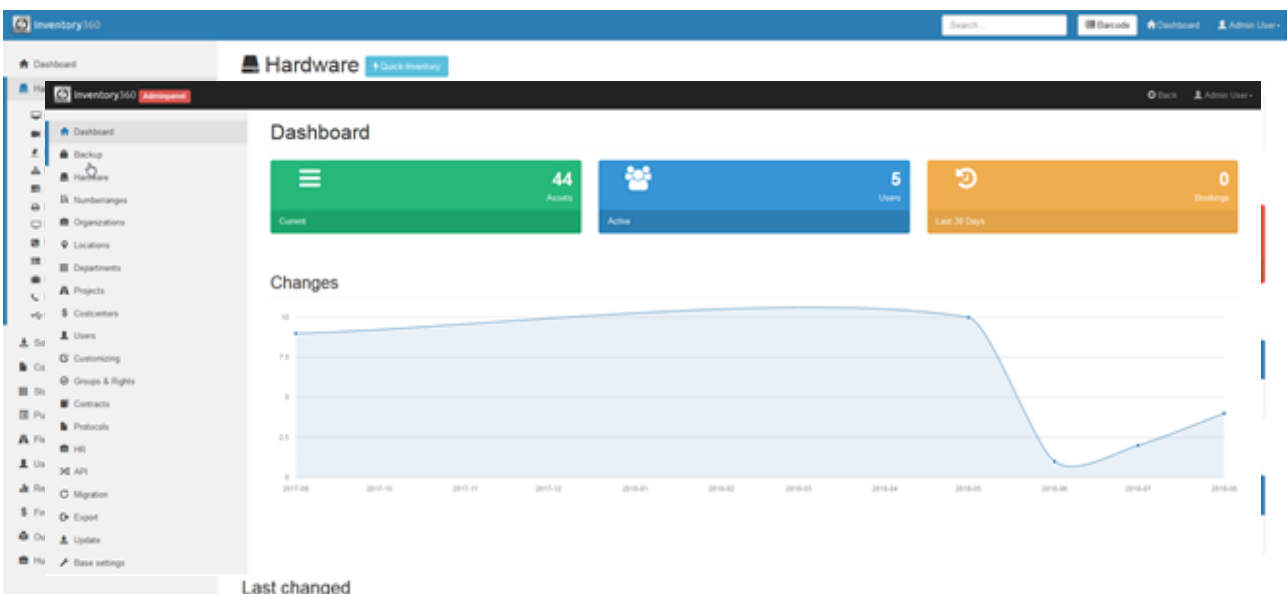

We offer individual solutions for your requirements bundled into the admin panel. Define your custom fields, own projects, texts and much more.

Areas

Assign various access rights to each area of inventory management. Easy to use and group-based.

- Hardware
- Software and Licenses
- Contracts
- Storage-Management
- Order-Management
- Reporting
- Finance
- Output Management
- Fleet Management
- HR
